Pursuant to UCA 53B-28-401, the Utah System of Technical Colleges presents the following report:

- The Utah System of Technical Colleges Board of Trustees Executive Committee passed Policy 220 on June 20, 2019 to establish minimum requirements for technical college compliance with the new statute. Resources for safety training curriculum were identified and discussed in system-wide meetings since the legislation's passage. Colleges are using online platforms and sharing best practices to develop and deliver required safety training to students, faculty, and staff.

  General Observations: The Council on Occupational Education accredits each of the colleges within UTech, and it requires the colleges to keep updated health and safety plans. Health and Safety Plans are readily located on the college websites, and most have the new statutory requirements included and easy to find within the mandated plans. Commissioner's office staff will work closely with the others to ensure complete compliance as quickly as possible. Below are links to each tech college's health and safety plan.
